

Create Flask project

Create User table with user with email,username,roll number, password.

Solution:

```
CREATE TABLE user(email,username,rollno,pw);
INSERT INTO user (email,username,rollno,pw) VALUES ('a@gmail.com', 'abc','01','abc');
INSERT INTO user (email,username,rollno,pw) VALUES ('b@gmail.com', 'bcd','02','bcd');
INSERT INTO user (email,username,rollno,pw) VALUES ('c@gmail.com', 'cde','03','cde');
INSERT INTO user (email,username,rollno,pw) VALUES ('d@gmail.com', 'def','04','def');
```

Output:

The top screenshot shows the following SQL commands in a SQLite IDE:

```
1 CREATE TABLE user(email,username,rollno,pw);
2 INSERT INTO user (email,username,rollno,pw) VALUES ('a@gmail.com', 'abc','01','abc');
3 INSERT INTO user (email,username,rollno,pw) VALUES ('b@gmail.com', 'bcd','02','bcd');
```

The bottom screenshot shows the result of the query `SELECT * FROM user`. The result is a table with the following data:

email	username	rollno	pw
a@gmail.com	abc	01	abc
b@gmail.com	bcd	02	bcd

Perform UPDATE,DELETE Queries with user table

Solution:

```
UPDATE user SET username = 'alpha' WHERE rollno = '01';
SELECT* FROM user
```

```
DELETE FROM user WHERE username = 'bcd';
SELECT* FROM user
```

Output:

The screenshot shows the SQLite GUI with the following SQL commands entered:

```
1 UPDATE user SET username = 'alpha' WHERE rollno = '01';
2
3 SELECT* FROM user
```

The resulting table view shows the following data:

i	email	username	rollno	pw
	a@gmail.com	alpha	01	abc
	b@gmail.com	bcd	02	bcd

The screenshot shows the SQLite GUI with the following SQL commands entered:

```
1 DELETE FROM user WHERE username = 'bcd';
2
3 SELECT* FROM user
```

The resulting table view shows the following data:

i	email	username	rollno	pw
	a@gmail.com	alpha	01	abc

Connect python code to db2.

Solution:

```
pip install ibm_db
from ibm_db import connect
connection = connect('DATABASE=<database name>;'
                    'HOSTNAME=<database ip>;' # 127.0.0.1 or localhost works if it's local
                    'PORT=<database port>;'
                    'PROTOCOL=TCPIP;'
                    'UID=<database username>;'
                    'PWD=<username password>;', ", ")
def results(command):

    from ibm_db import fetch_assoc

    ret = []
    result = fetch_assoc(command)
    while result:
        ret.append(result)
        result = fetch_assoc(command)
    return ret # Ditch this line if you choose to use a generator.
from ibm_db import tables

t = results(tables(connection))
```

```

from ibm_db import exec_immediate

sql = 'LIST * FROM ' + t[170]['TABLE_NAME']
rows = results(exec_immediate(connection, sql))

```

Create a flask app with registration page, login page and welcome page. By default load the registration page once the user enters all the fields store the data in database and navigate to login page authenticate user username and password. If the user is valid show the welcome page

Solution:

```

@app.route('/login', methods=['GET', 'POST'])
def login():
    error = None
    if request.method == 'POST':
        if request.form['username'] != 'admin' or request.form['password'] != 'admin':
            error = 'Invalid Credentials. Please try again.'
        else:
            return redirect(url_for('home'))
    return render_template('login.html', error=error)

```

html code:

```

<html>
<head>
<title>Flask Intro - login page</title>
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<link href="static/bootstrap.min.css" rel="stylesheet" media="screen">
</head>
<body>
<div class="container">
<h1>Please login</h1>
<br>
<form action="" method="post">
<input type="text" placeholder="Username" name="username" value="{{
    request.form.username }}">
<input type="password" placeholder="Password" name="password" value="{{
    request.form.password }}">
<input class="btn btn-default" type="submit" value="Login">
</form>
{% if error %}
<p class="error"><strong>Error:</strong> {{ error }}
{% endif %}
</div>
</body>
</html>

```

Output:

Please login

admin

.....

Login

Error: Invalid credentials. Please try again.

Hello, World!
